## ABOUT ME

---

I'm a product-minded UI Engineer with a strong focus on craft, polish, and high-fidelity implementation. I bring experience from fast-moving startup environments, partnering closely with design and product teams to translate intent into precise, production-quality interfaces, from design systems and reusable components to end-to-end feature work.

## EXPERIENCE

---

### Frontend Developer

Buenos Aires

Numia

2025-Current

- Migrating the company's core platform from AngularJS to Angular 19, crafting UIs using the existing design system and taking ownership of usability decisions to deliver improved, modern user experiences.
- Contributing to new feature development across separate React-based products, outside of the main platform migration.
- Actively use AI-powered developer tools like Cursor and Claude Code to streamline workflows and ship faster without compromising on quality.

### Frontend Developer

Remote

Ontop

2022-2025

- Built a reusable design system library published on npm, working closely with a design system designer to define components, interaction patterns, and states, ensuring consistency and scalability across the platform.
- Partnered with design and product teams to improve the single and bulk contract creation flow, with heavy involvement in shaping the user experience, resulting in faster hiring workflows and a significant reduction in support tickets.
- Migrated multiple domains to a MicroFrontend architecture for improved modularity and scalability.
- Maintained and developed new features for the Contracts Team, contributing to platform reliability and functionality.

### Frontend Developer

Argentina

Tapercito

2022-2023

- Built the landing page and web application for a sustainable startup, working independently on the frontend alongside a backend developer.

### Frontend Developer

Argentina

Trocafone

2021-2022

- Maintained and developed new features for the company's main monolith, ensuring performance, reliability, and scalability.
- Conducted A/B tests to optimize user experience and drive data-informed decision-making.
- Worked on additional projects, including the Checkout Cart and Order tracker, delivering new features and improving functionality outside the monolith.

### Frontend Developer

Argentina

Cognizant Softvision

2019-2021

- Developed and maintained an internal SaaS application
